

SALAMANCA I

Berkeley's drilling objectives in the December quarter were to generate sufficient data to allow calculation of a revised resource for the Retortillo deposit and an initial resource for the Santidad deposit, and also to continue to test the potential extensions of the Retortillo-Santidad stratigraphy. Both objectives were successfully completed and ongoing drilling continues to test the potential for additional resources in the Salamanca I project area.

New Resource Estimates

Results from the new resource calculations were as follows:

At a **200ppm U₃O₈** cutoff, total inferred and indicated resources are:

	Ore Tonnes (Mt)	Grade (ppm U₃O₈)	Contained (m lb U₃O₈) at 200ppm U₃O₈ cutoff
Retortillo	9.6	615	13.0
Santidad	3.4	382	2.9
Zona 7	0.6	760	1.0
TOTAL	13.6	563	16.9

including the following **indicated** resources:

	Ore Tonnes (Mt)	Grade (ppm U₃O₈)	Contained (m lb U₃O₈) at 200ppm U₃O₈ cutoff
Retortillo	3.8	581	4.8

At a **100ppm cut-off** the total inferred and indicated resources are:

	Ore Tonnes (Mt)	Grade (ppm U₃O₈)	Contained (m lb U₃O₈) at 100ppm U₃O₈ cutoff
Retortillo	15.6	432	14.9
Santidad	6.7	255	3.8
Zona 7*	0.6	760	1.0
TOTAL	22.9	389	19.6

** Zona 7 resources have been calculated at a 200ppm cut-off only.*

including the following **indicated** resources:

	Ore Tonnes (Mt)	Grade (ppm U₃O₈)	Contained (m lb U₃O₈) at 100ppm U₃O₈ cutoff
Retortillo	5.7	431	5.4

Note – for comparative purposes - previously published resource targets at Salamanca I (based on historic ENUSA estimates) included an additional 590,000 pounds of U₃O₈ in 3 small deposits which are excluded from the above calculations because detailed work has not yet commenced.

These estimates are based on data from historical drilling campaigns by the Junta de Energia Nuclear (JEN) and Empresa Nacional Uranio S.A. (ENUSA) in the period from the late 1950's to the mid 1980's at Retortillo and Zona 7, supplemented by Berkeley drilling of 72 diamond and RC holes at Retortillo, 87 RC and diamond holes at Santidad and 7 diamond holes at Zona 7. They have been developed by a team of in-house and consulting geoscientists with calculations based on block modeling methods (for Retortillo and Santidad) and the polygonal method (for Zona 7).

Full details of the new resource calculation are included in the announcement dated 19 November 2007.

Drilling Results

Drilling in the quarter comprised:

- Retortillo - 12 diamond drill holes totalling 1167.9m
- Santidad - 13 diamond drill holes totalling 948.4m and 70 reverse circulation drill holes totalling 4041.0m

Full details of the drilling are set out in the Appendix. Notable intersections (at a cut-off grade of 200ppm U₃O₈) include:

Retortillo

RTO-067	3.0m @ 0.046% U ₃ O ₈ from 33.0m and 6.0m @ 0.058% U ₃ O ₈ from 45.0m
RTO-068	5.0m @ 0.038% U ₃ O ₈ from 46.0m and 13.0m @ 0.050% U ₃ O ₈ from 68.0m
RTO-069	18.0m @ 0.069% U ₃ O ₈ from 32.0m
RTO-070	43.0m @ 0.024% U ₃ O ₈ from 39.0m
RTO-072	10.0m @ 0.086% U ₃ O ₈ from 28.0m and 3.0m @ 0.044% U ₃ O ₈ from 45.0m
RTO-075	3.0m @ 0.060% U ₃ O ₈ from 40.0m.

Santidad

SANR-047	11.0m @ 0.031% U ₃ O ₈ from 24.0m
SANR-052	9.0m @ 0.066% U ₃ O ₈ from 14.0m

	and 5.0m @ 0.036% U ₃ O ₈ from 33.0m
SANR-059	13.0m @ 0.035% U ₃ O ₈ from 33.0m
SANR-071	14.0m @ 0.048% U ₃ O ₈ from 3.0m and 6.0m @ 0.037% U ₃ O ₈ from 31.0m
SANR-077	24.0m @ 0.026% U ₃ O ₈ from 15.0m and 7.0m @ 0.029% U ₃ O ₈ from 49.0m
SANR-081	16.0m @ 0.020% U ₃ O ₈ from 10.0m
SAN-089	6.0m @ 0.070% U ₃ O ₈ from 16.0m
SANR-102	10.0m @ 0.076% U ₃ O ₈ from 9.0m
SANR-125	9.0m @ 0.037% U ₃ O ₈ from 14.0m
SANR-130	10.0m @ 0.076% U ₃ O ₈ from 3.0m and 3.0m @ 0.024% U ₃ O ₈ from 21.0m.

Figure 1 below sets out the drilling completed at Santidad in the quarter. Subsequent to the calculation of the revised JORC inferred resource on 19 November 2007, ongoing drilling extended the known limits of the Santidad mineralisation by approximately 550m to the North West and 250m to the South East.

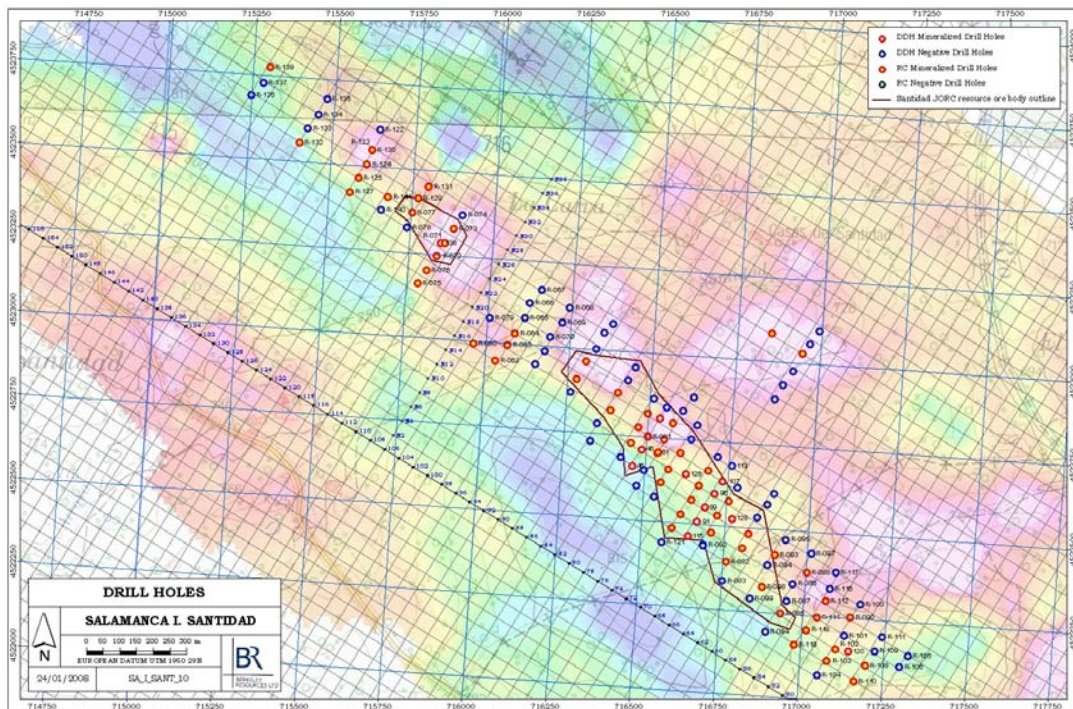

Figure 1 – December 07 Quarter drilling at Santidad

The Santidad mineralisation remains open along strike in both directions. Drilling in the March quarter is aimed at testing for extensions to the North West and also in the area immediately

December 2007 Quarterly Report Page 4

North of the Santidad deposit where two positive holes were drilled in the September quarter and where a potential parallel structure is interpreted. Land access is limited to the South East for the time being due to quarantine issues with a cattle herd.

Drilling at Retortillo was focussed on upgrading resources and increasing confidence in the geological, structural and mineralogical interpretations for the new resource estimate. Results of the drilling are set out in Figure 2 below:

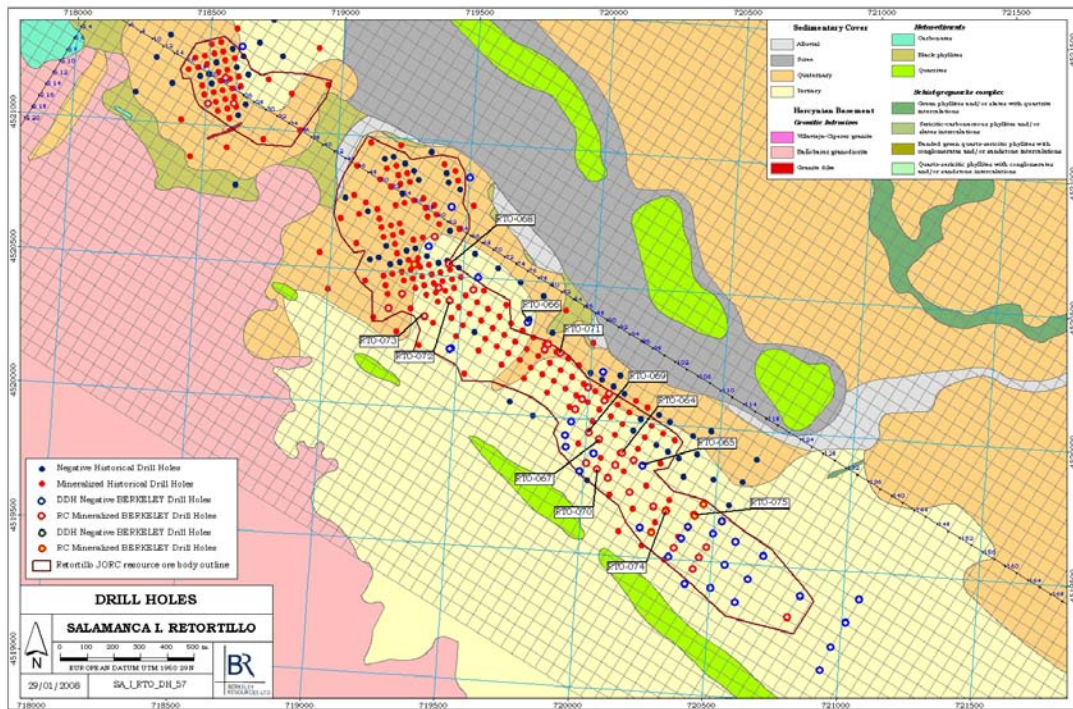

Figure 2 – December 07 Quarter drilling at Retortillo

The Santidad mineralisation occurs in the same sequence of greenschist facies metamorphosed slates and shales as the Retortillo mineralisation. The Santidad mineralisation is generally of a weaker tenor than that at Retortillo, probably due to the lack of Tertiary cover and the eroded topography. These features cause the Santidad mineralisation to be at exposed at the surface and to be generally at shallow depth with low strip ratios.

The Retortillo diamond drilling and petrological studies on the resultant core have led to a better understanding of the Retortillo mineralisation. Preliminary interpretations of the petrology into a predictive geological model show the uranium mineralisation is related to the weathering process with cordierite-biotite-pyrrhotite being converted to pinnate-kaolinite-pyrite. This process is

affected by the presence or absence of Tertiary cover and may explain the lower tenor of the Santidad mineralisation, relative to Retortillo.

The geological logging and petrology has also show the mineralisation to be dominantly controlled by the host lithologies and the degree of the weathering process. Continuing petrological work on these aspects will help to prioritise drill targets as determined from the airborne surveys and geological investigations.

AIRBORNE GEOPHYSICAL SURVEY

Aretech Solutions completed flying a 5,924 line kilometre, low level, close-spaced airborne magnetic and radiometric survey in the quarter. The survey covered Salamanca I, part of the Salamanca II, and the Caceres VI and Toledo II areas as set out in Figure 3 below.

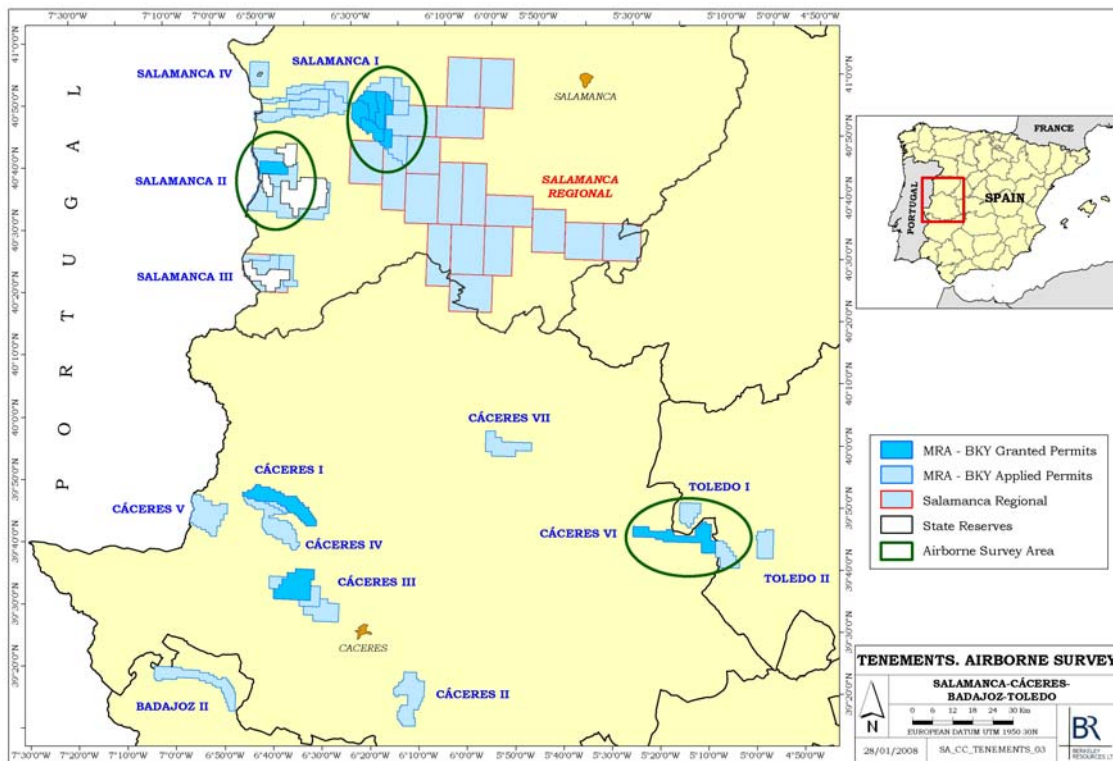

Figure 3 – Berkeley tenements and Aerial Survey areas

The survey had two objectives:

1. to better define controlling structures and host lithologies associated with uranium mineralisation; and

2. to provide direct and indirect criteria for targeting new areas with potential for mineralisation, particularly in areas of partial or complete cover.

Initial indications are that the survey has provided very good data for both objectives. Compilation, processing and interpretation of data is ongoing and is expected to be completed in coming weeks.

SALAMANCA REGIONAL TENEMENTS

Figure 3 also sets out additional exploration permits applied for in the quarter – collectively the “Salamanca Regional” project. This project comprises a number of regional scale exploration permits with the potential for similar lithologies to Santidad and Retortillo, including

- potential extensions of the Retortillo-Santidad stratigraphy itself;
- potential areas of similar carbonaceous shale stratigraphy, including beneath Tertiary cover; and
- areas of contact between carbonaceous shales and granites.

It is understood that little or no uranium exploration work has been undertaken on most of the Salamanca Regional tenements. A review for any available historical data is presently underway.

SALAMANCA I SCOPING STUDY

The successful increase in the resource base at Salamanca I, along with the outstanding potential for additional resources, gave the Company impetus to commence a scoping study on the potential for mining at Salamanca I. AMC Consultants were engaged to prepare the study and substantial progress was made in the quarter.

AMC expect to complete the study in early February.

COOLGARDIE GOLD PROJECT

(Sipa Resources Ltd earning 70% from Berkeley)

Eight Reverse Circulation holes for 858 metres were drilled at two Prospects at Coolgardie in December.

Six holes on six sections were drilled at the Forest Gold Prospect adjacent to the Burbanks Shear Zone to follow-up previous Sipa RAB intersections such as 10 metres at 2.5 g/t gold. A best result of 5 metres grading 8 g/t gold was returned. Whilst all other holes returned zones of anomalous gold, no other potentially ore-grade intercepts resulted, including from holes 50 metres north and south along strike of the best result.

Two holes were drilled into a significant northerly trending soil anomaly 1.5 kilometres long known as the Comet Shear Prospect, located 5 kilometres northwest of the Forest Gold Prospect. These holes were drilled scissored towards each other. The hole drilled to the west returned 50 metres grading 0.2 g/t from 20 metres, whilst the hole drilled to the east (and probably down dip) returned 83 metres at 0.3 g/t from 25 metres. Results are being evaluated and more drilling may be required.

The information in this report that relates to Exploration Results, Mineral Resources or Ore Reserves is based on information compiled by Mr Peter Ellis, who is a Member of The Australian Institute of Geoscientists and an employee of Berkeley Resources Limited. Mr Ellis has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2004 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Mr Ellis consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.

APPENDIX A – Drill results for December quarter

Santidad Drilling and Assay Summary (31.12.07)

Appendix 5B

Mining exploration entity quarterly report

Introduced 1/7/96. Origin: Appendix 8. Amended 1/7/97, 1/7/98, 30/9/2001.

Name of entity

BERKELEY RESOURCES LIMITED

ABN

40 052 468 569

Quarter ended ("current quarter")

31 December 2007

Consolidated statement of cash flows

	Current quarter \$A'000	Year to date (6 months) \$A'000
Cash flows related to operating activities		
1.1 Receipts from product sales and related debtors	-	-
1.2 Payments for (a) exploration and evaluation	(2,781)	(4,663)
(b) development	-	-
(c) production	-	-
(d) administration	(450)	(830)
1.3 Dividends received	-	-
1.4 Interest and other items of a similar nature received	356	743
1.5 Interest and other costs of finance paid	-	-
1.6 Income taxes paid	-	-
1.7 Other	-	-
- Business development	(47)	(83)
Net Operating Cash Flows	(2,922)	(4,833)
Cash flows related to investing activities		
1.8 Payment for purchases of:		
(a)prospects	-	-
(b)equity investments	-	-
(c) other fixed assets	(48)	(156)
1.9 Proceeds from sale of:		
(a)prospects	-	-
(b)equity investments	-	-
(c)other fixed assets	-	-
1.10 Loans to other entities	-	-
1.11 Loans repaid by other entities	-	-
1.12 Other	-	-
Net investing cash flows	(48)	(156)
1.13 Total operating and investing cash flows (carried forward)	(2,970)	(4,989)

+ See chapter 19 for defined terms.

1.13	Total operating and investing cash flows (brought forward)	(2,970)	(4,989)
	Cash flows related to financing activities		
1.14	Proceeds from issues of shares, options, etc.	-	450
1.15	Proceeds from sale of forfeited shares	-	-
1.16	Proceeds from borrowings	-	-
1.17	Repayment of borrowings	-	-
1.18	Dividends paid	-	-
1.19	Other		
	– capital raising expenses	(3)	(34)
	Net financing cash flows	(3)	416
	Net increase (decrease) in cash held	(2,973)	(4,573)
1.20	Cash at beginning of quarter/year to date	23,936	25,536
1.21	Exchange rate adjustments to item 1.20	-	-
1.22	Cash at end of quarter	20,963	20,963

Payments to directors of the entity and associates of the directors

Payments to related entities of the entity and associates of the related entities

		Current quarter \$A'000
1.23	Aggregate amount of payments to the parties included in item 1.2	137
1.24	Aggregate amount of loans to the parties included in item 1.10	-

1.25 Explanation necessary for an understanding of the transactions

Payments include executive remuneration, superannuation, directors' fees and consulting fees.

Non-cash financing and investing activities

Notes

- 1 The quarterly report provides a basis for informing the market how the entity's activities have been financed for the past quarter and the effect on its cash position. An entity wanting to disclose additional information is encouraged to do so, in a note or notes attached to this report.
- 2 The "Nature of interest" (items 6.1 and 6.2) includes options in respect of interests in mining tenements acquired, exercised or lapsed during the reporting period. If the entity is involved in a joint venture agreement and there are conditions precedent which will change its percentage interest in a mining tenement, it should disclose the change of percentage interest and conditions precedent in the list required for items 6.1 and 6.2.
- 3 **Issued and quoted securities** - The issue price and amount paid up is not required in items 7.1 and 7.3 for fully paid securities.
- 4 The definitions in, and provisions of, *AASB 1022: Accounting for Extractive Industries* and *AASB 1026: Statement of Cash Flows* apply to this report.
- 5 **Accounting Standards** - ASX will accept, for example, the use of International Accounting Standards for foreign entities. If the standards used do not address a topic, the Australian standard on that topic (if any) must be complied with.
